

# Distributed Systems

Justus Klingemann

## Organization (1)

### Formal Regulations

- The module “Object-Oriented Programming in Java - Advanced Course” is required for participation in this module
- The grade is determined by a written exam (90 minutes); no aides are allowed
- You can only participate in the exam if you successfully participated in the exercises, i.e., solved the necessary number of programming tasks
- For the exercises as well as the exam a registration in the system HIS is required

## Organization (2)

### Lectures and Exercises

- The module consists for each student of two lecture blocks and one exercise block
- The exercises start today
- Starting from Saturday, 16<sup>th</sup> April, 11:00am you can register via Moodle for a fixed exercise slot
- The number of participants per exercise slot is limited

## Organization (3)

### Exercises

- The focus is on the creation of distributed applications based on Java
- The initial exercise sheets are voluntary and do not count for passing the exercises
- To take part in the exam it is required to solve at least three of five assessed exercise sheets
- You have to solve the exercises completely on your own! (No working in groups!)
- You have to solve the exercises within your exercise slot at the university!
- Each exercise has a strict deadline
- Further details will be found on the assessed exercise sheets
